Marine Sanitation	H

DOMETIC REFRIGERATOR WARRANTY POLICY

This warranty is given by Dometic Pty Ltd, 6 Treforest Drive, Clayton, Victoria 3168, for 24 months from the date of purchase against any defect arising from faulty materials or workmanship.

Repairs will be carried out during normal business hours only by Dometic Pty Ltd, or its duly authorised service agents, and are subject to the warranty conditions and exclusions hereunder.

WARRANTY CONDITIONS

- The company will only provide service on presentation of **proof of purchase**, on either the Dometic product, or the Caravan / RV / Pleasure Craft in which the Dometic product has been installed, to any authorised service agent. The purchaser must allow the service agent to photocopy the proof of purchase to facilitate his claim to the manufacturer.
- Warranty repairs can only be performed by authorised service agents and under no circumstances will Dometic reimburse repairs carried out by unauthorised persons. Tampering with any part of the product by unauthorised personnel will automatically void the warranty.
- The product must be used solely for domestic purposes only. If the product is used for commercial purposes the warranty is 6 months only.
- Where applicable, the products must be used on the appropriate electrical voltage, gas type and pressure, or fuel source.
- If at any time during the warranty period any part or parts are replaced with a part or parts not supplied or approved by Dometic Pty Ltd, this warranty shall immediately become void.

Important notice

Before calling a service technician please check carefully the operating instructions, service booklet and warranty terms and conditions. If the product fails for any of the reasons detailed therein, or is faulty due to abuse, misuse or improper installation, then a service fee shall be charged to the purchaser.

If you have any queries regarding the interpretation of the warranty you should contact Dometic Pty Ltd.

Whilst this book represents service outlets at the time of printing, changes occur from time to time. Should you have any queries or wish to locate your nearest authorised service agent please contact Dometic Pty Ltd.

WARRANTY DOES NOT COVER

- Any refrigerator/ freezer which has been :
 - (a) Subject to misuse, neglect, accident or alteration by any person.
 - (b) Damaged or destroyed by fire, flood, act of God or other inevitable accident.
- Fair wear and tear.
- Damage from foreign substances such as dirt or liquid.
- Travelling expenses or call out fee to and from authorised service agents premises.
- Cleaning and adjustment of the gas system. This is considered to be a part of normal product maintenance.
- Non operation of the refrigerator/freezer or resultant damage to the unit where the refrigerator/ freezer has been operated in an out of level situation.
- Freight cost of the appliance or parts, to or from, point of service or transit damage.
- Dometic Pty Ltd are not responsible for resultant loss or damage sustained by the purchaser.
- Non operation of the appliance or resultant damage to the unit where the appliance has not been installed, ventilated, flued or operated in accordance with the manufacturers instructions.

Apart from any warranties implied by the Trade Practices Act 1974 or any relevant State legislation all other warranties express or implied whether arising by virtue of statute or otherwise are hereby excluded.

EXTENDED WARRANTY - 3 way refrigerators

An extended warranty period of an additional 3 years is available on the absorption cooling unit.

See extended warranty application card.

Some useful hints for Dometic appliances and products

Make sure

A Dometic gas product is not to be operated on LPG whilst travelling.

A Dometic 3 way refrigerator is not running on 12 volts when the vehicle is parked, otherwise you will drain the battery in a short time.

Defrosting of refrigerators/freezers is carried out frequently.

Refrigerator / freezer doors are left open when the product is not being used for extended periods.

Liquids or items with a strong odour are well packaged.

Refrigerator doors are secured by means of the travel catch when the RV is moving.

Only one power source is used at a time to operate 3 way refrigerators/freezers.

The Dometic 3 way refrigerators are designed to provide excellent cooling even in high ambient temperatures. Problems occurring with the functioning of the refrigerator can often be overcome by improving both installation and ventilation.

For further information and a copy of a booklet titled "Optimal installation of Dometic absorption refrigerators in caravans and motor homes" please contact Dometic Pty Ltd.

Appliances are run in level conditions as specified in their user instruction manuals.

Never close glass cook top lids on hot burners.

The Dometic product is serviced depending on use at least once a year by an authorised service agent.

Windows and doors are closed and locked before travel.

Sky light domes are locked before travel.

Sky light blinds are opened before travel.

Only Seitz cleaner and polish is used to maintain sky lights & windows panes.

Awnings and awning hardware are in the locked position before travel.

Awnings are retracted in windy conditions.

No harsh chemicals are used to clean awning fabrics, use mild soap and water.

No foreign objects are placed in toilets.

Always read the operating instructions thoroughly before use.

3-Way Refrigerators / Freezers

FAULT FINDING

Owners Observation

Cause/Remedy

- | | |
|---|--|
| No sound from refrigerator | <ul style="list-style-type: none"> • As there are no moving parts in 3 way absorption type refrigerators/ freezers , no sound will be detected during operation. |
| Refrigerator fails to operate on 240 volts. | <ul style="list-style-type: none"> • Controls set incorrectly. Check that thermostat is set to maximum, power is switched on and controls are set to obtain 240 volt operation. • Break in electrical circuit. Check fuses, switches and plugs. • Drop in supply voltage. Check that the supply voltage to the refrigerator/ freezer is maintained at full rate. |
| Refrigerator fails to operate on 12 volts. | <ul style="list-style-type: none"> • Controls set incorrectly. Check that the 12 volt switch is on, and that the controls are set correctly to obtain 12 volt operation. • Break in electrical circuit. Check fuses, switches and plugs. • Drop in supply voltage. Check that the 12 volt supply to the refrigerator/ freezer is maintained at the required full rate. |
| Refrigerator fails to operate on LP Gas. | <ul style="list-style-type: none"> • Controls set incorrectly. Check that the thermostat is set to maximum, gas is turned on and controls are set to obtain gas operation. • Gas supply restricted. Check that the gas bottle is full, all LP gas valves are open, ensure gas jet is clean and burner is alight. • Incorrect lighting procedure. Check that flame failure safety valve has not been prematurely released. |
| Refrigerator not getting cold enough. | <ul style="list-style-type: none"> • Refrigerator/ freezer not level. The refrigerator/ freezer must be level in both directions to operate correctly. • Ventilation/ installation inadequate. The refrigerator/ freezer must be ventilated, installed and flued in accordance with manufacturers instructions. • Drop in supply voltage. Check that the supply voltage to the refrigerator/ freezer is maintained at full rate. • Controls not set correctly or thermostat incorrectly used. In hot weather the thermostat setting should be closer to maximum than usual. • More than one source of energy used at the same time. • Door is not closed properly or magnetic sealing strip is defective. • Gas system restricted or flame has gone out. Depending on use, gas system should be periodically cleaned and adjusted. • Evaporator heavily coated with ice. Refrigerator/ freezer should be defrosted at more frequent intervals. • The gas pressure is incorrect. Check the pressure at both the gas bottle and burner. |

Portable Compressor Refrigerators & Freezers

FAULT FINDING

If your refrigerator/freezer should not operate properly, please perform the following checks before calling for service:

- Ventilation:** Are all ventilation openings freely accessible and is there adequate ventilation?
- Thermostat:** Is the unit switched on? Is the thermostat knob in the right position?
- Fuse:** Check the fuse in the DC-plug.
- Energy:** Is the green power indicator light on, if not check the following: Is there current in the 240V power socket? For use on DC, check that there is sufficient voltage in the battery.
- Ice Forming:** Has an ice layer been formed over the evaporator, if so, defrost immediately.
- Food:** Was a large amount of warm food placed in the cool box at one time?

If, after checking the above, the appliance still does not operate properly, contact your closest service agent. When reporting the problem, state the type of problem, the appliance model number, product number and serial number. This information can be found on the data plate on the bottom of the appliance.

Truma Hot Water Systems

FAULT FINDING

Gas Operation:

Symptom

Cause/ Remedy

When switching on the heater does not operate.

No 12V power supply.
 >Check the power supply (operation voltage minimum 12.0V).
 >Check the boiler fuse.

When switching on , the heater does not operate , and the red lamp lights up after approximately 30 seconds.

Cowl cover fitted to exterior vent.
 Air in the gas supply.
 No gas supply.
 >Remove cowl cover and clear any obstruction.
 >Check gas valve open and gas bottle has gas .
 >To purge air from system, switch off the appliance, wait 5 minutes and switch on again.

Heater operates for a prolonged time, and then the red lamp lights.

Over temperature protection has operated .
 >Check system is filled with water, refill if required (close drain valve).
 >To unlock, switch off the appliance, wait 5 minutes and switch on again.

Electrical Operation:

Sympton

Cause/ Remedy

When switching on, the heater does not operate.

No 240V power supply.
 Over temperature protection operated
 >Connect the caravan to the site supply and check circuit breaker.
 >Check system is filled with water, refill if required (close drain valve).
 >If the over temperature cutout has been activated, switch unit off, wait 5 minutes then switch on again.

If fault persists please contact the nearest Dometic Service Agent.

Air Conditioners, Roof Mounted and Underbunk.

FAULT FINDING

Symptom	Cause / Remedy
When switching on, the unit does not operate.	No 240V power supply. >Connect the caravan to the site supply and check residual current circuit breaker.
When switching on heating operation, the unit does not operate.	Temperature setting on the control panel too low. >Set the ambient room temperature on the control panel.
When switching on cooling operation, the unit does not operate.	Temperature setting on the control panel too high. >Set the ambient room temperature on the control panel.
Note, on some models:	
If the room temperature is below 18°C, the compressor will not operate due to low ambient temperature. (cooling mode only)	
Unusually high condensation on the unit or the cold air ducts.	Door or windows open (high humidity) >Close all doors and windows during operation, set cooling to high on the control panel.
Unit operates for a prolonged period (heating or cooling) and then stops.	Indoor air filter blocked. Aperture for the outdoor air blocked . >Check the indoor air filter, and the aperture for the outdoor air. >On underbunk units, check the air intake to the stowage box, (in which the unit is installed) is not blocked .

If fault persists please contact the nearest Dometic Service Agent.
